

Nexus Document Platform 4.2 — API Reference

POST /api/v1/documents

Creates a document and schedules asynchronous processing. The response contains document_id and processing_job_id.

GET /api/v1/documents/{id}

Returns document state, classification, and metadata summary.

GET /api/v1/documents/{id}/metadata

Returns extracted metadata.

POST /api/v1/documents/{id}/reprocess

Schedules a new processing job. Operators need the Operator role.

GET /api/v1/jobs/{id}

Returns processing status, attempt count, and failure information.

Errors

400 indicates malformed input. 401 indicates missing or invalid authentication.

403 indicates insufficient authorization. 404 indicates a missing resource.

409 indicates an optimistic-concurrency conflict. 429 indicates throttling.

500 indicates an unexpected server-side failure.

Pagination

Collection endpoints use page and page_size. The default page size is 50 and the maximum is 200.
